

To build your mantel we will need: the size of your firebox, the amount of tile, stone or brick to be left exposed, plus the dimensions of any projection from the wall. When measuring for your mantel be sure to note any size-limiting factors (switch plates, window casings, etc.) A salesperson will use these dimensions to recommend the overall height, width and depth of your mantel.

The mantels shown here are built to order based on your specifications. In addition to these designs, we have the capability to reproduce virtually any mantel or to create one perfectly suited to your unique situation. Please call for quote. Lead time varies depending on wood species ordered.

Our shelf mantels are made to order. Mantel height and shelf projection are given below. Length is per your specification. Most of these mantels can be modified as caps to fit over existing firebox projections. Please call for quote. Lead time varies depending on wood species ordered.

MAYFIELD H: 5¾" P: 6¼" Paint Grade, Oak, Maple, Cherry
